

Tailored to meet your business needs today. Adaptable architecture for tomorrow.

Feature for Feature, No Other Phone System Provides More Value for Your Money.

TeleVantage is an open systems IP-PBX that delivers unprecedented communications capabilities to medium-size businesses, branch offices and call centers. The flexible software feature set makes it easy to customize and administer, allowing businesses to improve customer service and enhance productivity. Built on industry standards and supported by world-class Intel® technologies, TeleVantage eliminates the need for proprietary hardware, enabling it to grow and evolve as business needs change while maintaining a low cost of ownership.

The right phone system is a strategic asset. Artisoft's TeleVantage is the business communications solution that enables you to increase productivity across the entire organization, enhance customer service and improve your bottom line. A single TeleVantage system supports up to 288 trunks and 720 extensions. The open architecture lets you extend functionality by integrating with your business' existing applications. Impress callers with personalized greetings that recognize them by name, or have crucial calls automatically forwarded to your home after hours. For businesses with contact center or call center needs, powerful built-in functionality lets you maximize agent performance and customer care. Feel secure knowing your phones will always be up, even during a power or server failure. With no proprietary hardware to replace, you can easily and cost-effectively keep pace with future improvements.

No other full-featured phone system is as accessible or easy to use. With traditional systems, over 80% of features are never touched due to the complexity of arcane key commands. With TeleVantage, an intuitive Windows® interface puts all basic and advanced features at your fingertips, reducing the learning curve and increasing productivity. Drag-and-drop to transfer or conference calls and point and click to call contacts, listen to or screen voice mail, or forward calls. Even without a PC, phone users hear clear, verbal menus to guide them through all call handling actions, voice mail options, and account setup choices. Administer the system from anywhere on the network – even remotely – and perform routine maintenance such as moves, adds and changes, eliminating dependency on expensive service technicians. Take the power of your phone system out of the closet with TeleVantage and give your company a competitive edge!

Ideally suited to today's mobile and "virtual" workforce. Utilize VoIP to reduce toll costs and connect remote and mobile workers with full access from anywhere in the world. "Follow-me" call forwarding and simultaneous ringing ensures that you get your important calls whether you're at work, at home, or on the road. Roaming customers are no problem either, with personalization features such as contact PINs and verbal call screening that identify who is calling even if caller ID is not available. With TeleVantage, you're always in touch.

Find out why TeleVantage is consistently applauded for technical excellence and innovation.

TeleVantage 6.0 Features

Complete software-based phone system
